

Setup se action tak: pehle opportunity samjho, phir authorized control aur bachat ka proof.

Live control & safety loop

Task run hote waqt safety first; phir user override, changed conditions aur completion check.

- Input / data
- AI / planning
- Decision
- Control
- Safety / hold
- Result

INTERNET FAILS? EDGE MODE
Valid local plan + fresh local sensors can continue. Buffer data; no valid plan means configured safe hold.

IMPORTANT SAFETY BOUNDARY
Manual override cannot bypass protection. No DIY mains source switching or uncontrolled battery charging.

Savings proof & user report

Consumption measure karo; financial aur carbon impact ko transparent baseline ke against estimate karo.

- Input / data
- AI / planning
- Decision
- Control
- Safety / hold
- Result

HONEST REPORTING: energy can be measured; avoided cost / CO2 depend on the baseline. Actual customer savings require field validation.
